SAMVEEKSHANA-2025
"न हि ज्ञानेन सदृशम्"

"SHUT THE BOX"

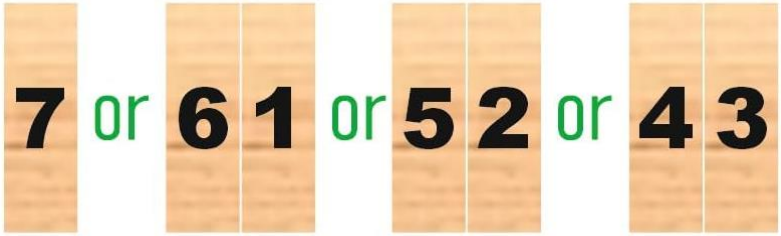
Date of event: 12/03/2026
Time: 11:00 am to 01:00 pm

A round of the game consists of each player taking one turn to try to shut the box. Winner will be the one who shuts all flips first in each round

Each player has to

1. **Roll 2 dice and add up the number**

2. **Flip the number tiles that add up to the total number of dice (minimum 1 and maximum 2 flips at a time)**



3. **Continues rolling dice and flipping number tiles until you can't flip any tiles. Your turn is over. The sum of the remaining open tiles is your score. After each player finished their turn, the winner is the player with lowest score**

Example:

If the total is 8 (Dice count), the player may choose one of the following options **(minimum 1 and maximum 2 flips at a time)** to shut the flip or flips:

- 8
- 7 & 1
- 6 & 2
- 5 & 3

Assuming that one of the options is available to be played, the player selects one, covers the selected number or numbers and proceeds to throw the dice again.

If none of the options are available because at least one number is already covered in each case, then the player's turn finishes and the player scores the sum of the numbers that are still uncovered.

For example, if numbers 1, 5 and 9 are uncovered and the player throws a 4, options are 4 or 3 & 1, neither of which are available - so the turn finishes and the player's score is 15. **(3 extra rolls for minimum possibilities will be given, in extra 3 rolls winning is considered)**

If anyone succeeds in shutting the box i.e. closing all the numbers, that player wins outright immediately. Otherwise, after each player has taken one turn, the winner of the round is the player with the lowest score.

- If the total is 12 (Dice count), the player may choose one of the following options **(minimum 1 and maximum 2 flips at a time)** to shut the flips as like
  - 7 & 5
  - 8 & 4
  - 9 & 3
  - 10 & 2

  If none of the options are available because at least one number is already covered in each case, then the player's turn finishes and the player scores the sum of the numbers that are still uncovered. **(After 3 extra rolls)**

- **Game rounds**
  There will be a winner in each round and prize money will be given on the spot
